Sprint Backlog: Sprint 1

Sprint Goal:

To establish the core functionality for hostel owners to register their properties and manage basic applicant data.

User Stories Included in Sprint 1:

Story 1: Register a Hostel

As a Hostel Owner, I want to register my hostel profile, so that I can list my property on the platform.

Story 2: View & Update

As a Hostel Owner, I want to view and update available rooms and current occupancy status, so that I can manage room availability efficiently.

Story 11: Create Tenant

As a tenant, I want to create an account and manage my profile so that I can save my preferences and interact with the platform.

Story 12: Search properties

As a tenant, I want to search for rental properties using filters like location, price, facilities and availability so that I can quickly find options that match my needs.

Story 13: View Properties

As a tenant, I want to request a property viewing or book a unit online so that I can inspect the property before committing to a rental.

User Stories to be Implemented in Sprint 2:

Story 3: Review Applicants

As a Hostel Owner, I want to review and approve tenant applications, so that I can fill my hostel rooms with suitable tenants.

Justification: This is a logical next step after Sprint 1. Now the owner can approve the applicants that have applied to the rental. This unlocks further user stories which cannot be implemented before this.

Story 16: Request Parking

As a tenant, I want to request a parking slot through the platform so that I can secure a designated parking space for my vehicle.

Justification: "Request Parking" is included in Sprint 2 to significantly improve tenant satisfaction by addressing a fundamental need immediately following rental approval. Providing this essential amenity enhances the tenant experience and adds considerable value to the rental process.

Story 7: Accept Parking

As a Hostel Owner, I want to review and approve tenant parking requests so that I can allocate parking spaces efficiently and ensure proper management of available slots.

Justification: "Accept Parking" is included to provide hostel owners with essential functionality for managing parking allocation and tenant requests.

Story 15: Give Feedback

As a tenant, I want to rate and review my rental experience so that other tenants can make informed decisions based on real feedback.

Justification: Sprint includes "Give Feedback" to foster transparency by enabling tenants to rate and review properties.

### Story 15: Collect Tenant Feedback

As a Hostel Owner, I want to collect tenant feedback, so that I can enhance the quality of my hostel services.

Justification: "Collect Tenant Feedback" is included to enable hostel owners to gather insights for enhancing the quality of their services. And also shows how each of their properties are performing.
